PROFESSIONAL SUMMARY

Computer Science & Business Systems student building practical AI-powered and web applications using Python, JavaScript, React, Next.js and Generative AI. Experienced in hackathons, frontend development, prompt engineering and collaborative project development, with a focus on solving real-world problems through technology.

EDUCATION

Visvesvaraya Technological University (VTU), Belagavi Expected Graduation: 2029

B.E. in Computer Science & Business Systems (CSBS) — Semester 1 | CGPA: 8.95/10

Y.B. Annigeri PU Science & Commerce College

Class XII (2nd PUC), Science & Commerce — 89.5%

TECHNICAL SKILLS

Programming: Python, C, JavaScript, TypeScript

Web Development: HTML, CSS, React, Next.js

AI & Generative AI: Generative AI, Prompt Engineering, Gemini, OpenAI API

Data & Visualization: Chart.js, Data Analysis

Developer Tools: Git, GitHub, VS Code

PROJECTS

MPLADS SENTINEL | *AI / Data Analysis / Explainable Risk Analysis — Smart India Hackathon 2026 (Ongoing)*

GitHub / Live Demo: to be published

- Developing an AI-powered audit-prioritization and anomaly-analysis platform for MPLADS (Members of Parliament Local Area Development Scheme) for Smart India Hackathon 2026.
- Analyzing project cost, timeline, spatial overlap, agency patterns, and inter-project relationships to identify unusual patterns across large datasets.
- Designing an explainable audit-priority / risk-scoring model to help officials prioritize projects for further investigation, positioned as an independent AI intelligence layer rather than a fraud-detection system.

Pixel Cat | *Next.js, React, TypeScript, CSS*

[GitHub](#) | [Live Demo](#)

- Built a responsive Next.js/React marketing site in TypeScript for a cozy, focused-work desktop companion, using CSS animations to drive interactive UI states and simulated app behavior.
- Structured reusable, responsive components across multiple sections, with a planned direction toward a full desktop application.

Sky Predict | *HTML, CSS, JavaScript, Chart.js, Open-Meteo API — NASA Space Apps Challenge 2025*

[GitHub](#) | [Live Demo](#)

- Built a weather intelligence web app in JavaScript with Chart.js, delivering real-time weather, 7-day forecasts, and 6-month climate trends through interactive visualizations powered by the Open-Meteo API.
- Designed a JARVIS-style AI weather assistant and weather-alert system for NASA Space Apps Challenge 2025, translating complex weather data into an accessible interface under hackathon time constraints.

Mindful Haven | *HTML, CSS, JavaScript*

[GitHub](#) | [Live Demo](#)

- Built a student-focused mental wellness web platform with mood tracking, journaling, guided breathing, and study-planning features.
- Designed an intuitive, non-clinical interface focused on making mindfulness and self-care approachable for students.

HACKATHONS & ACHIEVEMENTS

- Smart India Hackathon 2026 — Participant, MPLADS SENTINEL
- AB Talks ViCODATHON — Participant, 48-Hour AI Hackathon
- NASA Space Apps Challenge 2025 — Participant, Sky Predict
- Hack With India — Vibe Hacks 2.0 — Top 1000 among 3000 teams
- Quantum Summit — 2nd Place, Presentation

TECHNICAL EVENTS

- Google DevFest Belgaum 2025
- Build with AI — Google Developer Groups

CERTIFICATIONS

- Anthropic — AI Fluency: Framework & Foundations (Aug 2026)
- AWS — Fundamentals of ML & AI
- Google Cloud — Skill Badges
- upGrad — Generative AI Foundations
- HackerRank — Python (Basic)
- HP LIFE — AI for Beginners, Data Science & Analytics, Cybersecurity Awareness, Critical Thinking in the AI Era
- Be10x — AI Tools Workshop

POSITIONS OF RESPONSIBILITY

- Volunteer, Firewall — Smart India Hackathon | October 2025

LANGUAGES

English, Hindi, Kannada
