

NIDHI

Computer Science & Business Systems Student | Frontend Developer | AI & Web Development
the.nidhi.bhat@gmail.com | [linkedin.com/in/the-nidhi-bhat](https://www.linkedin.com/in/the-nidhi-bhat) | github.com/the-nidhi-bhat | [Portfolio](#)

PROFESSIONAL SUMMARY

Computer Science & Business Systems student focused on frontend and web development with React, Next.js, JavaScript, and TypeScript. Building practical AI and Generative AI projects through hackathons and team collaboration, with a focus on shipping real-world products.

EDUCATION

Visvesvaraya Technological University (VTU), Belagavi

Expected Graduation: 2029

B.E. in Computer Science & Business Systems (CSBS) | **1st Year CGPA: 8.68/10**

Y.B. Annigeri PU Science & Commerce College | Class XII (2nd PUC), Science & Commerce — 89.5%

TECHNICAL SKILLS

Programming: Python, C, JavaScript, TypeScript

Frontend / Web: HTML, CSS, React, Next.js, Tailwind CSS

AI / Generative AI: Generative AI, Prompt Engineering, Gemini, OpenAI API

Data / Visualization: Chart.js, Data Analysis, Data Visualization | **Developer Tools:** Git, GitHub, VS Code

Exploring: DSA, Docker, MongoDB

PROJECTS

AgriN Crop Advisor | *React, TypeScript, Supabase, Gemini API*

[GitHub](#) | [Live Demo](#)

- Developed an AI-powered crop health web app where farmers photograph a leaf and receive a Gemini-based disease assessment with step-by-step guidance for 10 supported Indian crops, with scans saved to a per-crop history.
- Built authenticated, farmer-oriented workflows with Supabase Auth and private image storage, plus a simple reading mode and localized guidance in 9 languages, including Kannada.

MPLADS Sentinel | *Next.js, FastAPI, scikit-learn — Smart India Hackathon 2026 (Ongoing)*

[GitHub](#)

- Developing an anomaly-analysis and audit-prioritization platform that scores MPLADS projects from 0–100 across cost, timeline, spatial overlap, agency patterns, and progress vs. expenditure.
- Designing an explainable risk-scoring approach with per-signal evidence and map-based views to help officials prioritize projects for further review, surfacing unusual patterns rather than declaring fraud.

MindHeaven / Lumora | *Next.js, React, TypeScript, Tailwind CSS*

[GitHub](#) | [Live Demo](#)

- Built a responsive, student-focused wellness platform with an interactive dashboard and personalized user flows, emphasizing approachable UX and a calm interface.

Campus Builder | *Next.js, TypeScript, Supabase — In Development*

- Building a campus collaboration platform for students to find teammates and form project teams, implementing authenticated workflows, notifications, and command-palette navigation.

Legacy Code Whisperer | *IBM Bob 2.0 Hackathon / lablab.ai — Team CodexMatrix*

[GitHub](#) | [Live Demo](#)

- Built a React and Express prototype that analyzes a legacy Node.js app, applies one approved change in an isolated Git worktree, and verifies it with behavioral tests and automatic revert on regression.

EXPERIENCE & LEADERSHIP

Google Developer Groups on Campus (GDGoC) — VTU Belagavi | *Co-Organizer*

2026–27

- Collaborate with the campus developer community on technical initiatives and programs that help students explore web and AI development.

Smart India Hackathon 2026 — Phantom Syndicate | *Team Lead, MPLADS Sentinel*

Internal Hackathon, 2026

- Led the team and coordinated project development for MPLADS Sentinel during the SIH 2026 internal hackathon.

HACKATHONS & ACHIEVEMENTS

- Smart India Hackathon 2026** — Team Lead, Phantom Syndicate / MPLADS Sentinel | **lablab.ai — IBM Bob 2.0 Hackathon** — CodexMatrix / Legacy Code Whisperer
- Hack With India — Vibe Hacks 2.0** — Top 1000 among 3000 teams | **Quantum Summit** — 2nd Place, Presentation
- NASA Space Apps Challenge 2025** — Participant, Sky Predict | **AB Talks ViCODATHON** — Participant, 48-Hour AI Hackathon
